# QBank for the USMLE Step 1

The QBank for the USMLE Step 1 is the very best source of practice, preparation and review questions for this exam.

**3011 + of the very best, classic,  
simulated Multiple Choice Questions  
Preparation Questions for the USMLE Step 1**

## Features of the USMLE Step 1 QBank:

- **3011 classic, simulated USMLE Step 1 multiple choice questions (MCQs)**
- **Covers the following thirteen subjects tested on the USMLE Step 1:**

**Anatomy**  
**Epidemiology and Biostatistics**  
**Medical Ethics**  
**Embryology**  
**Pathology & Pathophysiology**  
**Genetics**  
**Neuroscience**

**Psychology**  
**Histology/Molecular Biology**  
**Pharmacology**  
**Microbiology & Immunology**  
**Biochemistry**  
**Physiology**

- **Each MCQ covers a different USMLE Step 1 topic from the subject areas tested**
- **Answers and detailed explanations for all MCQs**
- **Take tests in timed and un-timed tutor modes**
- **Generate tests by subject category or any combination of categories**
- **Unused, incorrect only, or all question selections**
- **Choose how many questions you want to take in each block**
- **Mark MCQs and write your own notes during the test**
- **Review detailed analysis of USMLE Step 1 tests taken**
- **Performance review by subject category**
- **Overall cumulative performance**

- **Compare your scores with other people**
- **Real MCQ interface for true simulation, with normal lab values**
- **Revised and expanded with feedback from the most recent exams**
- **Continuous updates to the questions and explanations**
- **Accessible 24/7 from anywhere**
- **Pass the AIPGMEE - guaranteed or get 3 months free!**

A male medical student is on his clinical clerkship rotating in Surgery. He was asked to do a complete physical examination of a 53 year-old female patient, including breast examination. Becoming self-conscious, he haphazardly palpated both breasts and concludes that the findings are unremarkable for breast cancer. However, he remembered to inspect the area beneath the patient's armpits and discovered an enlarged lymph node on the right. On closer inspection of the right breast, he also noticed a small patch of thickened skin with slight dimpling. He related his findings to the resident and a mammography was done supporting the diagnosis of breast cancer.

The dimpling of the skin observed in the patient's breast is most likely due to which of the following?

- a) Blocked lymphatic drainage
- b) Necrotic breast tissue
- c) Calcified fat lobule
- d) Shortened Cooper's ligaments
- e) Cellulitis of the breast tissue

Rate question: ★ ★ ★ ★ ★

Subject: Anatomy

Correct Answer: d)

Explanation:

All users average for this question: 0%

The breast is suspended within the superficial fascia of the anterior chest wall. It roughly extends from the second to the sixth or seventh anterior intercostal space and from the edge of the sternum to the midaxillary line. The base of the breast overlies the pectoralis major muscle and is anchored to the pectoralis major fascia by the
